

COBAN TK306

Vehicle tracking device

Product Description

The device combines several functions of accurate positioning, safety, monitoring, emergency alarms and full tracking. It supports SMS / GPRS / Internet data transfer functions and can be widely used in many areas of location-based services, traffic safety and management.

Based on its design and mounting, the device was designed by the manufacturer primarily for tracking (land, water or air) vehicles - as a result, its users are primarily the owners and drivers operating the vehicles. The device is based on the GSM / GPRS network and GPS satellite positioning. You can track your device using SMS messages or a web application.

Settings that affect the operation of the device can only be changed from another device (smartphone, computer) using the appropriate application or SMS commands - so users can be sure that the device always works according to the parameters they specify.
