

ICAR IK205

Vehicle, person, package, boat tracking device

Product description

The device combines several functions of accurate positioning, safety, monitoring, emergency alarms and full tracking. It supports SMS / GPRS / Internet data transfer functions and can be widely used in many areas of location-based services, traffic safety and management.

Based on its design and portability, the device was designed by the manufacturer to track vehicles, containers and ships, so its users are primarily their owners and operators.

Settings that affect the operation of the device can only be changed from another device (smartphone, computer) using the appropriate application or SMS commands - so users can be sure that the device always works according to the parameters they specify.
